

Submersible Water Transfer Pump

Submersible water pump designed for efficient water transfer in various applications. Features a robust construction with a corrosion-resistant coating for durability.

Product Overview

Professional Submersible Water Transfer Pump

This submersible pump is engineered for high-efficiency water transfer in drainage, irrigation, and industrial management environments. Featuring a robust, corrosion-resistant construction and an advanced impeller design, it handles solids and debris with ease to prevent clogging. With integrated thermal overload protection and a compact, space-saving footprint, this unit ensures reliable operation and minimal maintenance for critical water management tasks.

Technical Specifications

Design & Durability	Corrosion-resistant coating, Submersible, Thermal overload protection, Compact footprint
Impeller Capabilities	Engineered to handle solids and debris to prevent clogging

Operational Metrics

Key Operational Metrics

1 Large

Discharge Port Size

Applications

Typical Applications

- Drainage systems
- Agricultural irrigation
- Industrial water management
