

Super Heavy Duty Low Center of Gravity Caster Wheel

This Japanese-style caster wheel is designed for exceptional load capacity and stability. Its low center of gravity enhances stability and ensures smooth movement.

Overview

Industrial Stability and Performance

This Japanese-style super heavy-duty caster wheel is engineered for demanding industrial environments requiring exceptional load capacity. Its low center of gravity design significantly enhances stability, effectively preventing tipping during operation. Constructed with robust steel and a corrosion-resistant finish, this caster ensures long-term durability and reliable performance for heavy machinery and equipment.

Key Features

Core Advantages

- Low center of gravity design
- High load capacity
- Robust steel construction
- Corrosion-resistant finish
- Integrated braking mechanism

Ideal Applications

Industrial Equipment, Heavy Machinery, Demanding Environments

Safety & Control

Braking Mechanism

Yes

Safety Function

Equipped with a reliable braking mechanism for secure locking and prevention of unwanted movement.
