

Surface Mount Timer and Counter Module

Compact surface mount timer and counter modules are designed for precise timing and counting applications. These modules feature a robust construction for reliable performance in various electronic instruments.

Product Overview

Professional Timing and Counting Solution

This surface mount module is engineered for high-precision timing and counting tasks in professional electronic instrumentation. Its compact footprint facilitates seamless integration into complex hardware designs where board space is at a premium. Built for reliability, this component ensures consistent performance across various industrial and consumer electronic applications.

Technical Features

Mounting Style	Surface Mount
Device Functions	Timing, Counting

Performance

Operational Capabilities

1 Compact
Module Format

Design Specifications

Design Characteristics

- Robust physical construction
- Optimized for instrument integration
- High precision circuitry
