

Suspended Access Platform

Suspended working platform is designed for temporary access to heights. It is constructed with a modular system, allowing for variable lengths and configurations.

Overview

Versatile Height Access Solution

The Suspended Access Platform provides a secure and modular system for temporary work at height, specifically engineered for building maintenance, facade repairs, and window cleaning. Its robust high-strength steel construction features a protective yellow finish that enhances durability against corrosion while ensuring high visibility in industrial environments. Designed with ease of logistics in mind, the platform allows for quick assembly and disassembly, making it an efficient choice for transport and site storage.

Technical Specifications

Core Components

- Modular platform system
- Safety railings
- Integrated hoist mechanisms
- Suspension stirrups

Material	High-strength steel
Finish	Yellow corrosion-resistant coating

Application

Design Advantages

Modular Configuration • Corrosion Resistant • Easy Transport • High Visibility

Primary Applications	Building Maintenance, Window Cleaning, Facade Work, Temporary Access
