

Suspended Platform Lifting Mechanism

This lifting mechanism is designed for use with suspended platforms. It utilizes steel frames, support structures, and cable systems for safe and efficient lifting operations.

Product Overview

Professional Lifting Solution

This suspended platform lifting mechanism is engineered for high-performance construction and maintenance applications. Featuring a robust steel construction with high-visibility yellow finish, it provides stable and controlled vertical movement. The system is designed for safety, incorporating redundant support cables and secure locking mechanisms to ensure operator protection during operation.

Technical Specifications

Construction Material	Steel
Finish Color	Yellow

Safety & Compliance

Safety Features	Redundant support cables, Locking mechanisms, Stable base
-----------------	---

Operational Features

Design Highlights

- Adjustable arms for various platform sizes
- A-frame base for enhanced stability
- Modular design for easy assembly and disassembly
- Optimized for transport and storage

Primary Application

Construction • Maintenance
