# Suspension Clamp for Insulated Conductors

Suspension clamp made of aluminum alloy features a weather-resistant plastic coating. It is designed to prevent insulation damage of phase conductors due to rubbing.

## Product Overview

### Suspension Clamp for Insulated Conductors

This suspension clamp is engineered for the secure installation of insulated conductors. Constructed from a durable aluminum alloy, the clamp features a specialized black, weather-resistant plastic coating at least 1 mm thick. This design significantly reduces friction and prevents chafing or insulation damage to the phase conductors during operation.

## Technical Specifications

### Available Models

| Model | Applicable Conductor Range |
|---|---|
| TH94 | 16-95 mm² |
| TH95 | 50-110 mm² |

### Key Features

- Aluminum alloy construction
- Weather-resistant coating
- Anti-chafing design
- Prevents insulation damage

| | |
|---|---|
| Material | Aluminum alloy with weather-resistant plastic coating |
| Coating Thickness | 1 mm |
