

Suspension Clamp for Overhead Power Transmission

This suspension clamp is designed for overhead power transmission and distribution applications. Constructed from galvanized steel, it provides a secure and reliable suspension point for conductors in electrical networks.

Overview

Heavy-Duty Suspension Clamp

The CGH Suspension Clamp is a robust fitting engineered for overhead power transmission and distribution networks. Constructed from high-quality galvanized steel, it offers exceptional corrosion resistance and durability in demanding environmental conditions. Designed with multiple bolts and nuts, it provides an adjustable, secure grip that ensures long-term stability and safety for electrical conductors.

Technical Specifications

Material	Galvanized Steel
Key Features	Corrosion Resistant, High Mechanical Load Capacity, Adjustable Grip, Heavy-Duty
Fastening System	Multi-bolt and nut assembly

Applications

Primary Applications

- Overhead power transmission lines
- Electrical distribution networks
- Conductor suspension and support

Certifications & Standards

Compliance

Corrosion Resistant Standard
