

Swimming Pool Water Circulation Pump

This swimming pool pump is designed for efficient water circulation and filtration. Its durable construction ensures reliable performance for maintaining clean and healthy pool water.

Product Overview

High-Efficiency Circulation

This single-stage centrifugal pump is engineered for quiet, continuous operation in swimming pool water circulation and filtration systems. It features a robust construction using glass-loaded polypropylene and Noryl, ensuring durability against pool chemicals and environmental conditions. With its integrated prefilter and high-grade stainless steel components, this pump provides reliable, long-lasting performance for maintaining clean and healthy pool environments.

Technical Specifications

Insulation Class

Class F

IP Protection Class

IP 55

Motor Type

Asynchronous, two poles

Construction Materials

Key Components

Component	Material
Pump body / diffuser	Glass loaded polypropylene
Impeller	Noryl
Motor shaft	Stainless steel AISI 420
Mechanical seal	Graphite and steatite
Motor housing	Aluminium L-2521

Features

Key Features

Quiet Operation, Built-in Prefilter, Continuous Operation, Thermal Protection, Epoxy Resin Impregnated Windings
