

Swimming Pool Water Heat Pump

This heat pump is designed for heating swimming pool water. It provides consistent water temperature and energy-saving operation for residential and commercial pools.

Product Overview

High-Efficiency Swimming Pool Climate Control

This heat pump unit provides a robust solution for maintaining optimal water temperatures in swimming pools, allowing you to extend your swimming season throughout the year. Designed with high-efficiency operation in mind, it features a durable titanium heat exchanger to ensure longevity and reliable performance. The system is engineered to deliver consistent heating power for both residential and commercial pool environments.

Technical Specifications

Heating Capacity

12000 BTU

Capacity

Unit Features

- Titanium Heat Exchanger
- Outdoor Control System
- High-Efficiency Compressor
- Extended Season Capability

Power Requirements

220V-240V 50Hz

Compatible Refrigerants

R22, R407C, R410A
