

Swing Check Valve for Backflow Prevention

This swing check valve is designed to prevent backflow in piping systems. Constructed from durable materials, it ensures reliable performance and long service life in various industrial applications.

Product Overview

Swing Check Valve Functionality

This swing check valve is specifically engineered to prevent backflow within industrial piping systems. Its design utilizes a hinged disc mechanism that swings open to facilitate forward flow and automatically seals when flow ceases or reverses. Built for durability, it ensures reliable, long-term performance and maintains system integrity across a variety of fluid applications.

Technical Specifications

Seal Performance

Tight Seal • Leak-Proof

Valve Type	Swing Check Valve
Primary Function	Backflow Prevention
Mechanism	Hinged Disc

Application & Usage

Fluid Compatibility	General Industrial Fluids, Piping Systems
