

Synthetic Round Lifting Slings

High-strength round slings are designed for lifting heavy loads. Constructed from durable synthetic materials, these slings offer flexibility and protection for both the load and the user.

Product Overview

Versatile Industrial Lifting Solutions

These high-strength synthetic round slings are engineered for secure and efficient heavy load lifting across various industrial and construction applications. Constructed from durable, flexible materials, they effectively conform to the shape of the load to ensure a balanced lift while providing essential surface protection. Each unit is clearly labeled for safety, with color-coded weight capacities to assist operators in selecting the appropriate sling for every rigging task.

Technical Specifications

Rated Weight Capacities

5000 KG

Maximum Load Capacity

Capacity Range

- 1 KG
- 5000 KG

Compliance and Safety

Key Safety Indicators

Color-Coded Capacity, Clear Load Marking, Surface Protection

Applications

Primary Applications

- Industrial Lifting
- Construction
- Rigging Operations
