

T-Segment Diamond Cup Wheel for Grinding

Diamond cup wheels are designed for aggressive grinding and material removal on concrete, stone, and masonry surfaces. The T-shaped segment configuration enhances airflow, reducing heat buildup and extending the life of the wheel.

Product Overview

T-Segment Diamond Cup Wheel

This T-segment diamond cup wheel is engineered for aggressive grinding and efficient material removal on concrete, stone, and masonry surfaces. The specialized T-shaped segment configuration promotes superior airflow, which effectively reduces heat buildup and significantly extends the service life of the tool. It is an ideal solution for leveling uneven surfaces, stripping away old coatings, and shaping edges with consistent performance.

Technical Specifications

Design Features

- T-shaped segment configuration
- Enhanced airflow design
- Heat reduction geometry
- High-performance diamond matrix

Primary Applications

Concrete Grinding, Stone Leveling, Masonry Shaping, Coating Removal

Tool Compatibility

Angle Grinders
