

Tactile Braille Sign Plate, 304 Stainless Steel

This sign plate is constructed from 304 stainless steel and features raised braille dots. It is designed to meet international standards for accessibility in public facilities.

Product Overview

Durable Tactile Signage

This tactile braille sign plate is manufactured from high-quality 304 stainless steel, ensuring long-lasting durability and resistance to environmental wear. Designed to meet international accessibility standards, it features raised tactile graphics and braille to provide essential information for both sighted and visually impaired individuals. Its robust construction makes it an ideal solution for public restrooms and facility management, ensuring compliance and inclusivity in any professional environment.
