

Tank Car for Liquid Transport

This tank car is designed for transporting liquids via rail. It features a cylindrical tank mounted on a rail car chassis, complete with safety features.

Product Overview

Professional Liquid Transport Solution

This specialized tank car is engineered for the efficient and safe transport of liquid cargo across rail networks. The robust cylindrical tank design is mounted on a heavy-duty rail chassis, ensuring stability and durability during transit. It includes integrated safety features such as top-mounted ladders and railings to facilitate easy access for maintenance and inspection.

Technical Specifications

Identification Number	G570XY001
Transport Capacity	Liquid Bulk, Rail Logistics
Chassis Configuration	Multi-axle rail car chassis

Safety & Features

Safety Equipment

- Integrated access ladder
- Top-side safety railing
- High-visibility markings
