

Tapered Grinding Wheel

Tapered grinding wheels, or Type 3 wheels, are designed for precision grinding and shaping tasks. The abrasive wheels are suitable for use on metals, composites, and ceramics.

Product Overview

Precision Tapered Grinding Solutions

These Type 3 tapered grinding wheels are engineered for high-performance precision grinding and intricate shaping applications. The specialized tapered design facilitates controlled material removal, allowing operators to effectively access tight spaces and complex geometries. Built for durability and efficiency, they are an essential tool for demanding metalworking, tool making, and industrial finishing tasks.

Technical Specifications

Abrasive Materials

- Aluminum Oxide
- Silicon Carbide

Wheel Type

Type 3 (Tapered one side)

Compatible Materials

Metals, Composites, Ceramics

Industrial Applications

Common Industrial Uses

- Metalworking
- Tool and die making
- Precision grinding
- Complex surface finishing
