

Tapered Roller Bearing 30214 7214

Tapered roller bearings are used in industries such as automotive, rolling mills, and mining. The tapered design allows for efficient load distribution and smooth operation, reducing friction and wear.

Product Overview

Robust Tapered Roller Bearing

The 30214 (7214) tapered roller bearing is expertly engineered to handle combined radial and axial loads with high efficiency. Its specialized design, consisting of a cone, cup, and tapered rollers, ensures smooth operation and extended service life. This component is essential for heavy-duty industrial and automotive applications requiring superior load distribution and friction reduction.

Technical Details

Load Handling

- High radial load capacity
- High axial load capacity
- Combined load management

Bearing Type	Tapered Roller Bearing
Model Number	30214, 7214

Application Compatibility

Suitable Industries

Automotive • Heavy Machinery • Industrial Equipment
