

TB Rotary Shaft Oil Seal

This TB seal is designed to retain lubricants and prevent the entry of contaminants. It is rigorously tested for dimensional accuracy and functional performance.

Product Overview

TB Rotary Shaft Oil Seal

The TB Rotary Shaft Oil Seal is a high-performance sealing solution designed to retain lubricants and prevent the ingress of contaminants in critical rotary shaft applications. Featuring a robust metal case for structural integrity and a double-lip configuration, these seals provide a reliable primary sealing element alongside an exclusion lip for dust protection. They are ideal for maintaining equipment longevity in demanding environments like gearboxes, pumps, and axles.

Technical Specifications

Typical Applications

- Agricultural Machinery
- Gearboxes
- Pumps
- Axles

Seal Design

TB Double Lip with Garter Spring

Material Options

NBR, SILICONE, FKM, ACM
