

TC5010 Topkit Tower Crane

This self-elevating top slewing tower crane is designed for construction sites. It features a long jib for extensive reach and a robust tower structure for stability.

Overview

TC5010 Topkit Tower Crane

The TC5010 is a specialized topkit tower crane engineered for demanding construction environments. Designed with a long jib for extensive reach and a robust tower structure, it provides the stability required for heavy lifting tasks. This equipment features high-visibility yellow aesthetics and integrated counterweights to ensure balanced and reliable operation across diverse building sites.
