

TCT Round Nose Router Bit

Tungsten carbide tipped round nose bit is designed for creating rounded grooves and decorative edges in woodworking. It features a durable TCT cutting edge for extended life and clean cuts in a variety of materials.

Overview

High-Performance TCT Round Nose Router Bit

This Tungsten Carbide Tipped (TCT) round nose bit is engineered for precision woodworking, specifically designed for creating smooth rounded grooves, coves, and decorative edges. Its durable cutting edge ensures an extended service life and consistently clean cuts across a wide range of materials, including hardwoods, softwoods, and composites. Whether used with handheld routers or advanced CNC machines, this tool delivers the professional-grade results required for high-quality craftsmanship.

Technical Features

Blade Material

Tungsten Carbide Tipped (TCT)

Application Type

- Rounded grooves
- Coves
- Decorative edges

Compatibility

Machine Compatibility

- Routers
- CNC Machines

Compatible Materials

Hardwoods, Softwoods, Composites
