

TCT Saw Blade for Non-Ferrous Metal Cutting

This saw blade is designed for cutting non-ferrous metals. It features a positive tooth configuration with tungsten carbide tipped (TCT) teeth.

Product Overview

Professional Non-Ferrous TCT Saw Blade

This professional-grade Tungsten Carbide Tipped (TCT) saw blade is engineered specifically for precise cutting of non-ferrous metals. Featuring a positive rake angle and a high-low gear tooth configuration, it ensures smooth, efficient performance across a variety of industrial applications. Built for demanding environments, this blade provides durability and accuracy in every cut.

Product Specifications

Material Compatibility	Non-Ferrous Metal
Tooth Configuration	Positive Rake Angle (High and Low Gear)
