

Telecommunications Network Infrastructure

This network diagram illustrates a telecommunications network infrastructure. It features network components such as switches, routers, servers, and base stations.

Overview

Comprehensive Telecommunications Network Infrastructure

This telecommunications infrastructure solution provides a robust and integrated framework for modern communication networks. It facilitates seamless connectivity by bridging various components including switches, routers, servers, and base stations. Designed for professional reliability, the system supports advanced exchange control, network user management, and multi-channel scheduling, making it an ideal choice for complex enterprise communication requirements.

Network Components

Core Infrastructure Elements

- Exchange Control Center
- Network User Management
- High-performance Servers
- Ethernet Switches
- Routers
- Maintenance Terminals

Connectivity

Interface & Link Support

Ethernet, E1, Microwave, Base Station Links

Operations

Operational Features

Local Dispatch • Remote Dispatch • Integrated Services Gateway • Link Adaptation
