

Telescopic Boom Crawler Crane

This crawler crane is designed for lifting and moving heavy loads. It features a telescopic boom and a robust crawler undercarriage for stability on uneven terrain.

Overview

High-Performance Crawler Crane

This heavy-duty telescopic boom crawler crane is engineered for demanding lifting operations across construction sites and industrial environments. It combines a robust crawler undercarriage for superior stability on uneven terrain with a powerful hoisting mechanism for reliable performance. Designed for precision and safety, this equipment offers the maneuverability and strength required for complex material handling tasks.

Performance

Lifting Performance

80 tons

Max Lifting Capacity

Design & Build

Boom Configuration	Telescopic
Undercarriage	Crawler-mounted

Operational Features

Operational Highlights

- Telescopic boom design
- Robust crawler undercarriage
- Enhanced stability on uneven terrain
- High-precision hoisting mechanism
- Integrated safety control systems

Ideal Applications	Construction Sites, Industrial Lifting, Heavy Material Handling, Uneven Terrain Operations
