

Telescopic Boom Truck Crane

This heavy-duty truck crane is designed for lifting and moving heavy loads in construction and industrial environments. The crane features a telescopic boom and a robust chassis for stability.

Overview

High-Performance Telescopic Boom Truck Crane

This heavy-duty truck crane is engineered for superior lifting performance and structural reliability in demanding construction environments. Utilizing advanced box-type outriggers and a mature jib telescoping technique, the machine ensures maximum stability and precise load management. The design incorporates a comprehensive safety device system and an upgraded double-circuit air pressure brake system to prioritize operator security during both travel and lifting operations.

Technical Specifications

Model Series	QY8B.5
Boom Characteristics	Telescopic Jib, Plug-in Boom Head, Embedded Boom Block

Safety and Control

Safety Features

- Double circuit air pressure brake system
- Comprehensive safety device system
- Box-type outrigger stabilizers
- High-rigidity rotary table and frame structure

Construction

Quality Standards

Automated Welding • Optimized Stress Design • High Rigidity Structure
