

Telescopic Elevator Component for Cranes

Telescopic elevator components are designed for use in construction machinery such as cranes. The metal components feature adjustable lengths and locking mechanisms.

Product Overview

Robust Telescopic Elevator Component

This telescopic elevator component is engineered for heavy-duty applications in agricultural and construction machinery, such as cranes. Featuring a robust metal construction, it includes adjustable length settings and secure locking mechanisms. The design incorporates distinct safety indicators, ensuring reliable performance and ease of use in demanding lifting and support environments.

Technical Specifications

Primary Applications

- Agricultural Machinery
- Construction Cranes
- Lifting and Support Systems

Model Number	ST-910
Material Type	Durable Metal Alloy
Key Features	Adjustable Length, Locking Mechanism, Safety Indicators
