

Television DVD Combo Circuit Board

This circuit board is designed for television sets with integrated DVD players. It incorporates a tuner module, a power supply section, and a video processing unit.

Product Overview

Integrated TV-DVD Control Solution

This circuit board serves as the central control unit for television sets equipped with integrated DVD players. It features a comprehensive design incorporating a tuner module, a dedicated power supply section, and an advanced video processing unit. Engineered for reliability, this board manages complex signal processing and power distribution to ensure seamless operation of both television and DVD playback functions.

Technical Specifications

Key Components

- Integrated circuits
- Capacitors
- Resistors
- Transistors
- Diodes
- Tuner module
- Power supply section
- Video processing unit

Application

Television • DVD Player • Combo System

Model Identifier

T.CX-S-07 FR40

Connectivity

Interface Connectors

Ribbon cable connectors, Tuner interface, Power input
