

# Television Main Board

This is a main board for a television, responsible for processing video and audio signals, controlling display functions, and managing input/output connections. It features various ports including VGA, component video (YPbPr), and antenna input.

## Product Overview

### Core TV Processing Unit

This Television Main Board serves as the central control hub for your display system. Engineered to manage complex video and audio signal processing, this component ensures high-fidelity output and seamless control over display functions. It includes versatile input and output options to support a wide range of broadcast and media devices.

## Technical Connectivity

### Input/Output Ports

- VGA Input
- Component Video (YPbPr)
- Antenna Input

## Hardware Features

### Compatibility

Standard TV Chassis • Signal Processing Certified

### Integrated Components

Integrated Circuits, Capacitors, Resistors, Signal Processing Unit
