

Television Main Board

Main board designed for color televisions. It incorporates integrated circuits and components for video processing, signal reception, and power management.

Product Overview

Core Functionality

This main board is designed for color television sets, serving as the central hub for signal processing and power management. It integrates essential circuitry to handle video processing, signal reception, and display control functions. The board is compatible with both CRT and LCD television architectures, ensuring versatile integration for repair or assembly projects.

Technical Specifications

Core Functions

- Video processing
- Signal reception
- Power management
- Audio/Video I/O handling
- Remote control interface
- Display/User interface support

Application	CRT Television, LCD Television
Board Type	Color TV Main Board
