

Temperature Measurement Sensor with Probe

This sensor is designed for precision temperature measurement. It features a durable probe and a robust cable for reliable data transmission.

Product Overview

Professional Grade Measurement Sensor

This precision temperature measurement sensor is engineered to provide reliable data transformation for industrial monitoring applications. It effectively senses environmental conditions and converts them into precise electrical signals for seamless transmission, processing, and control. With its durable probe construction and high-quality electrical connector, this device is designed to meet the rigorous demands of modern information recording and display systems.

Technical Specifications

Construction

Metallic Body • Polished Finish • Durable Probe

Interface Configuration

Two-wire electrical connection

Sensor Type

Temperature Measurement, Detection Device

Performance Features

Key Operational Benefits

- Accurate signal transformation
- Robust cable for reliable data transmission
- Compatible with monitoring and control systems
- Versatile application suitability
