

Textile Dyeing and Treatment Machine

This textile dyeing machine is designed for dyeing and treating textiles. Its stainless steel construction includes a bowl-shaped container and cylindrical holders for yarn-carrying components.

Product Overview

Professional Textile Processing Solution

This specialized textile dyeing and treatment machine is engineered for industrial apparel and fabric manufacturing environments. Constructed with high-grade stainless steel, the unit ensures exceptional durability, hygiene, and resistance to chemical processing agents. Its mobile design and integrated control interface provide operators with precise handling and efficient workflow management during textile preparation.

Technical Construction

Material Composition	Stainless steel
Mobility	Yes

Functional Components

Key Processing Features

- Stainless steel liquid treatment container
- Multi-spool/bobbin cylindrical holders
- Integrated side-mounted control panel
- Heavy-duty wheeled stand

Industry Usage

Primary Applications	Textile Dyeing, Fabric Treatment, Yarn Preparation
