

# Textile Liquid Treatment System

This modular textile machinery is designed for liquid processing applications. It is suitable for dyeing, washing, or chemical treatment of textiles, featuring interconnected columns for fluid handling.

## System Overview

### Precision Liquid Treatment

This modular textile liquid treatment system is designed for professional industrial applications, including dyeing, washing, and chemical processing. Featuring a robust stainless steel construction, the unit provides high resistance to chemical corrosion and ensures long-term operational durability. Its portable, wheel-mounted design allows for flexible integration into various textile manufacturing lines, while the sophisticated piping network supports precise control over complex fluid handling processes.

## Technical Features

### Processing Functions

- Liquid dyeing
- Textile washing
- Chemical treatment
- Fluid filtering

### Material

Stainless Steel

### System Design

Modular, Portable, Multi-Column, Wheeled Frame

## Operational Performance

### Process Optimization

**1 Parallel/Sequential**

Processing Capability
