

Therapeutic Ultrasound and Electrical Stimulation Device

This device utilizes ultrasound or electrical stimulation for therapeutic purposes. It features a control unit with indicators and attachments like transducer heads and electrode pads, suitable for physiotherapy and pain management.

Product Overview

Advanced Therapeutic Solution

This professional-grade therapeutic device integrates ultrasound technology with electrical stimulation capabilities to support comprehensive physiotherapy and pain management treatments. Designed with a central control unit and intuitive dial adjustments, it allows practitioners to precisely manage therapy parameters. The unit includes specialized transducer heads and electrode pads, making it a versatile tool for various clinical rehabilitation applications.

Technical Features

Therapy Modes	Ultrasound Therapy, Electrical Stimulation
Interface Type	Analog dial with LED indicators

Included Accessories

Included Components

- Central Control Unit
- Ultrasound Transducer Heads
- Electrode Pads

Application

Primary Applications

Physiotherapy • Pain Management • Rehabilitation
