

Thermal Fog Generator for Pest Control and Disinfection

This thermal fogger creates a dense fog through liquid vaporization. Designed for large-scale use, it is effective for pest control and disinfection.

Overview

High-Efficiency Thermal Fogging Solution

This thermal fog generator is engineered for large-scale pest control and disinfection tasks, producing a dense fog by vaporizing liquid solutions. Its robust stainless steel construction ensures durability in demanding environments while providing optimal fogging performance. Designed for precision, the machine features adjustable settings to control fog density and output to meet specific application requirements.

Performance Metrics

Performance Highlights

90 L/H

Spray Volume

1.5 L/H

Fuel Consumption

Technical Specifications

Model	6HYC-20-1
Chemical Tank Capacity	8 L
Fuel Tank Capacity	1.5 L
Exterior Material	Stainless Steel

Applications

Primary Applications	Pest Control, Disinfection, Large-scale Fogging
----------------------	---

Features

Key Features

- Adjustable fog density settings
- High-capacity solution tank
- Powerful engine for vaporizing liquid
- Robust stainless steel exterior
