

Thermoelectric Compact Refrigerator

This compact refrigerator uses thermoelectric technology to maintain a constant temperature between 10 and 15 degrees Celsius. It features a transparent cover and an LED display with green light.

Overview

Compact Cooling Solution

This thermoelectric compact refrigerator provides a convenient and portable cooling solution for small-scale applications. Designed with a transparent cover and an integrated LED display, it ensures easy monitoring of internal conditions. The unit utilizes advanced thermoelectric technology and is insulated with CFC-free polyurethane foam for efficient, environmentally friendly operation.
