

# Thermostatic Radiator Valve with Liquid Sensor

This thermostatic radiator valve uses a liquid sensor to control temperature. The valve features a plastic head.

## Product Overview

### Precision Temperature Control

This thermostatic radiator valve features a high-sensitivity liquid sensor designed for precise and reliable temperature regulation in heating systems. Constructed from a durable combination of brass and plastic, it offers robust performance for both residential and commercial environments. The head includes clear numbered settings, allowing users to easily adjust individual radiator output for enhanced energy efficiency.

## Technical Specifications

Materials	Brass, Plastic
Finish	White
Sensor Type	Liquid Sensor

## Performance

### Control Features

- Numbered temperature settings
- Individual radiator control
- Energy-efficient regulation
