

Thermostatic Radiator Valve with Liquid Sensor

This thermostatic radiator valve uses a liquid sensor to control temperature. It is designed to adjust the flow of hot water to the radiator based on room temperature.

Overview

High-Efficiency Temperature Control

This Thermostatic Radiator Valve (TRV) is engineered for precise temperature management in residential and commercial hydronic heating systems. Featuring an integrated liquid sensor and a chrome-plated brass body, it automatically regulates hot water flow to maintain consistent room comfort. The unit is manufactured and calibrated in-house to ensure high reliability and energy efficiency.

Dimensions & Build

Nominal Diameter	DN15
Total Height	129 mm
Total Width	55 mm
Body Material	Chrome-plated brass

Operation

Control Settings

- Numbered settings for temperature adjustment
- Automatic flow regulation based on ambient temperature
- Visual setting indicators (1-4)

Sensor Technology	Liquid Sensor
-------------------	---------------

Compliance

Standards & Compliance	EN-215 Certified, A-rating Energy Grade
Production Standard	Full-automatic production line assembly
