

Thermostatic Radiator Valve with Liquid Sensor

This thermostatic radiator valve uses a liquid sensor to control temperature. Its plastic head allows for adjusting the flow of hot water to the radiator.

Spec.	15mmx1/2"
Code	C00068
	C00069
	E00117
	E00118

Overview

High-Efficiency Thermostatic Control

This thermostatic radiator valve features a high-precision liquid sensor and is designed for self-regulating temperature control in hot water heating systems. Engineered for energy efficiency, it carries an A-rating energy grade and is manufactured in accordance with EN-215 standards. The valve's adjustable settings allow for precise room temperature management, ensuring consistent comfort and significant energy savings.

Manufacturing Details

Manufacturing Standards

- Full-automatic production line
- In-house calibrated liquid sensor
- In-house manufactured head and body
- Integrated quality control for all 3 key elements

Compatibility

Compatible Accessories

C00069 • C00068 • B00117 • B00118
