

Thermostatic Radiator Valve with Liquid Sensor

This thermostatic radiator valve uses a liquid sensor to control temperature. It features a plastic head.

Product Overview

High-Efficiency Temperature Control

This thermostatic radiator valve is designed for precise temperature control of individual radiators within HVAC&R systems. Featuring a high-quality liquid sensor and a durable brass body, it ensures long-term reliability and corrosion resistance. The unit is manufactured and calibrated in-house to meet rigorous international standards, providing an energy-efficient solution for modern heating management.

Key Features

Energy Efficiency

A-rating Energy Grade

Compliance

EN-215 Certified

Technical Specifications

Core Components

- Liquid Sensor
- Thermostatic Head
- Brass Valve Body

Sensor Technology

Liquid Sensor

Body Material

Brass

Manufacturing Quality

Experience

14 yrs

Years of Research

Quality Standards

- Full-automatic production line
- In-house calibration
- In-house component manufacturing

Application

System Use

HVAC&R Systems

Control Method

Adjustable temperature settings for individual radiators
