

Thermostatic Radiator Valve with Liquid Sensor

This thermostatic radiator valve uses a liquid sensor to control temperature. It features a plastic head and is designed for hot water heating systems.

B00064

Overview

High-Efficiency Temperature Control

This Thermostatic Radiator Valve (TRV) is a self-regulating solution designed for hot water heating systems in both residential and commercial settings. It features a high-precision liquid sensor and a durable brass body to ensure reliable temperature regulation by modulating water flow. With an A-rating energy grade, this valve is engineered for maximum efficiency and easy installation.

Performance & Certification

Technical Specifications

Core Components

- Liquid sensor
- Thermostatic head
- Valve body

Materials

Component	Material/Finish
Valve Body	Brass
Thermostatic Head	White Plastic
Sensor Type	Liquid-filled

Installation Type

Threaded connection
