

Thermostatic Radiator Valve with Liquid Sensor

This thermostatic radiator valve uses a liquid sensor to control temperature. It features a plastic head and is designed for hot water heating systems.

Overview

High-Efficiency Temperature Control

This Thermostatic Radiator Valve (TRV) features an advanced liquid sensor designed for precise room temperature regulation. By automatically varying the flow of hot water to the radiator, it enhances comfort while significantly improving energy efficiency. Built and calibrated in-house, this self-regulating valve is an essential component for modern, cost-effective heating systems.

Performance & Certification

Energy Efficiency Rating
