

Thread Locking Adhesive

This thread locking adhesive prevents loosening of fasteners in assemblies subject to vibration. The anaerobic adhesive cures between metal surfaces to reliably lock threads.

Product Overview

Professional Thread Locking Solutions

These anaerobic adhesives are engineered to provide a secure, durable lock for threaded assemblies by curing in the absence of air between metal surfaces. They effectively prevent the loosening of fasteners caused by vibration, shock, and thermal expansion. Available in various formulations, they cater to diverse industrial needs ranging from low-strength maintenance tasks to high-temperature structural applications.

Technical Specifications

Color Code Reference

Product Type	Color
Threadlocker	Red / Blue
Bearing Retainer	Green

Formulations Available

Low Strength, Medium Strength, High Strength, High Temperature Resistance, Bearing Retainer, Pipe Sealant

Key Features

Performance Benefits

- Prevents fastener loosening from vibration
- Resistant to mechanical shock
- Cures in the absence of air
- High-temperature stable formulations available
