

Three-Blade Industrial Propeller

This is a three-blade propeller with a central hub and mounting base. It is used in machinery or industrial applications, possibly related to airflow or fluid dynamics.

Overview

High-Performance Industrial Propeller

This three-blade industrial propeller is engineered for precision airflow and fluid dynamics applications. Designed with a central hub and a durable mounting base, it offers reliable performance for machinery integration. Its robust construction makes it an ideal component for demanding industrial environments requiring consistent and efficient operation.

Technical Specifications

Number of Blades	3
Design Features	Three-blade design, Central hub, Industrial grade
Mounting Base	Black mounting base included

Material & Construction

Blade Material	Light-colored composite/plastic
----------------	---------------------------------

Application

Common Applications

- Industrial machinery
- Airflow systems
- Fluid dynamics equipment
