

Three-Cylinder Diesel Engine

This robust diesel engine is designed for applications within the electric power, transmission, and distribution sectors. The engine features a three-cylinder configuration, offering a balance of power and efficiency.

Product Overview

Robust Three-Cylinder Power Solution

The R3105T is a high-performance three-cylinder diesel engine specifically engineered for the electric power, transmission, and distribution sectors. It features an advanced direct injection system that balances power output with fuel efficiency and reduced emissions. Designed for durability, this engine reliably handles demanding industrial workloads while maintaining optimal operating temperatures through its integrated cooling system.

Technical Specifications

Cylinder Configuration	Three-cylinder
Injection Type	Direct injection
Cooling System	Integrated liquid cooling

Key Components

Standard Equipment

- Fuel injection pump
- Oil filter
- Air intake system

Applications

Target Industries	Electric Power, Transmission, Distribution, Industrial
-------------------	--
