

Three-Furrow Agricultural Plough for Primary Tillage

This agricultural plough features a robust frame with three independently adjustable plough bodies, each equipped with a share, moldboard, and landside for cutting, inverting, and pulverizing soil. It also includes a depth control wheel to ensure consistent tillage depth.

Product Overview

Three-Furrow Agricultural Plough

This robust three-furrow agricultural plough is engineered for primary tillage, providing efficient soil preparation for planting. Designed to cut, invert, and pulverize soil effectively, it helps bury crop residue and weeds while significantly improving soil aeration. With its adjustable plough bodies and integrated depth control wheel, it ensures consistent performance and creates an ideal seedbed for various agricultural applications.

Technical Specifications

Components per Body

- Share
- Moldboard
- Landside

Plough Type	Three-Furrow
Application	Primary Tillage

Features

Performance Benefits

Improved Soil Aeration • Crop Residue Burial • Consistent Tillage Depth

Key Features	Robust Frame, Independently Adjustable Bodies, Depth Control Wheel
