

Three-Gun Automated Spray Welding System

This automated system features three spray guns for efficient material deposition during welding. It is engineered for consistent and precise welding in high-volume production environments.

Product Overview

Automated Spray Welding Solution

The TJAW 333 is an industrial-grade three-gun spraying welding system engineered for high-volume automated production environments. By integrating three spray guns, this system optimizes material deposition to ensure consistent, precise, and uniform coverage across complex welding applications. Built for durability and reliability, it features advanced control systems designed to enhance operational performance in professional manufacturing facilities.

Technical Specifications

Model Number	TJAW 333
Number of Spray Guns	3
Application Type	Automated Welding, Industrial Spraying, High-Volume Production

Features

Key Capabilities

- Optimized material deposition
- Uniform coating coverage
- Advanced control system integration
- Durable industrial construction
