

Three-Jaw Pipe Clamp

This three-jaw pipe clamp is a robust tool designed for secure pipe alignment and welding preparation. Featuring a three-jaw clamping mechanism, it ensures precise centering and alignment of pipes with varying diameters.

Product Overview

Three-Jaw Pipe Clamp Overview

The Three-Jaw Pipe Clamp is a robust tool designed for secure pipe alignment and welding preparation. Featuring a three-jaw clamping mechanism, it ensures precise centering and alignment of pipes with varying diameters. Constructed for durability and stability, the adjustable jaws provide a firm grip, minimizing slippage and enhancing safety during demanding pipe fabrication, construction, and maintenance tasks.

Technical Specifications

Centring Precision

High Precision

Mounting Type

Short cylindrical center mounting

Clamping Range

Large

Applications

Primary Applications

- Welding pipe workpieces
- Cutting pipe workpieces
- Pipe fabrication
- Construction and maintenance

Compatibility

Equipped with welding machine tools

Features

Key Features

Compact structure, Easy to use, Adjustable jaws, High-strength material
