

Three-Phase AC Induction Motor

This three-phase AC induction motor is engineered for diverse industrial applications. It features a durable cast iron frame and optimized cooling for dependable performance and extended life.

Overview

High-Efficiency Industrial Performance

The YE2 series three-phase asynchronous motor is engineered for reliability in demanding industrial settings. Featuring a robust cast iron structure, it provides exceptional durability while minimizing vibration and noise. This versatile motor is an ideal solution for powering pumps, fans, compressors, and construction machinery in continuous duty operations.

Technical Specifications

Compliance

CE

Mounting Configurations

- Flange Mount
- IM B3004

Housing Material

High-strength cast iron

Key Performance Attributes

High Efficiency, High Reliability, Low Noise, Low Vibration

Application

Typical Industrial Uses

- Industrial Fans
- Water Pumps
- Compressors
- Construction Machinery
