

Three-Phase Asynchronous Electric Motor

This three-phase asynchronous motor is designed for industrial use. It features a robust construction with cooling fins, a mounting flange, and an electrical connection box.

Product Overview

MS Series Three-Phase Asynchronous Motor

The MS series three-phase asynchronous motor is engineered for robust industrial performance. Featuring an optimized design with integrated cooling fins, this motor ensures efficient heat dissipation during operation. It is equipped with a mounting flange for secure installation and a dedicated electrical connection box, making it a reliable solution for various transmission and distribution systems.

Technical Specifications

Series	MS Series
Motor Type	Three-Phase Asynchronous

Design Features

Cooling Mechanism

Cooling Fins

Installation Features

- Mounting Flange
- Electrical Connection Box

Applications

Typical Applications	Industrial Transmission, Distribution Systems
