

Three-Phase Asynchronous Electric Motor for Woodworking Machinery

This three-phase asynchronous electric motor is designed with a cast iron housing for industrial use. It is suitable for woodworking machinery and provides stable power output.

Product Overview

Industrial-Grade Power for Woodworking

This three-phase asynchronous electric motor is engineered specifically for demanding industrial woodworking environments. Featuring a robust cast iron housing, it ensures exceptional durability and stable performance during continuous operation. With an integrated design that simplifies electrical installation, this motor provides the reliable power output required for heavy-duty machinery.

Technical Specifications

Efficiency Class

IE2

Construction Material

Cast Iron

Motor Type

Three-phase asynchronous

Recommended Use

Woodworking Machinery, Heavy-duty Equipment

Operational Mode

Continuous
