

Three Phase Asynchronous Hoisting Motor

This three-phase asynchronous motor is designed for hoisting applications. It is also suitable for metallurgical applications.

Product Overview

High-Performance Hoisting Solutions

This three-phase asynchronous hoisting motor is engineered for demanding industrial applications requiring consistent reliability and precision. Built with a focus on robust construction and efficient cooling, it ensures stable operation under varying load conditions. Its design provides the high torque output and speed control necessary for heavy-duty lifting and machinery equipment.

Technical Specifications

Motor Type	Three Phase Asynchronous
Primary Applications	Hoisting, Industrial Machinery, Heavy-Duty Equipment
