

Three-Phase Asynchronous Motor

This three-phase asynchronous motor is designed for general-purpose applications. It features robust construction, reliable performance, and compliance with international standards.

Product Overview

High-Efficiency Y2 Series Motor

The Y2 series asynchronous motor is a robust and reliable electric motor designed for a wide range of industrial applications. Featuring a totally enclosed fan-cooled (TEFC) enclosure, it provides excellent protection against dust and water while ensuring quiet, energy-efficient operation. This motor is suitable for driving general-purpose machinery such as pumps, fans, compressors, and conveyors.
